

C++ Programming Assignment (Tasks 1-7)

Question 6: Grocery Bill

```
#include <iostream>
using namespace std;
int main() {
    double price, total;
    int quantity;
    cout << "Enter Price of Item: ";
    cin >> price;
    cout << "Enter Quantity: ";
    cin >> quantity;
    total = price * quantity;
    cout << "Total Bill: " << total << endl;
    return 0;
}
```

Question 7: Temperature Conversion

```
#include <iostream>
using namespace std;
int main() {
    double celsius, fahrenheit;
    cout << "Enter Temperature in Celsius: ";
    cin >> celsius;
    fahrenheit = (celsius * 9/5) + 32;
    cout << "Celsius: " << celsius << endl;
    cout << "Fahrenheit: " << fahrenheit << endl;
    return 0;
}
```

Question 8: Overtime Payment

```
#include <iostream>
using namespace std;
int main() {
    double hours, rate, overtimePay, totalSalary;
    cout << "Enter Total Working Hours: ";
    cin >> hours;
    cout << "Enter Hourly Rate: ";
    cin >> rate;
    if (hours > 40) {
        overtimePay = (hours - 40) * rate * 1.5;
    } else {
        overtimePay = 0;
    }
    totalSalary = (40 * rate) + overtimePay;
    cout << "Overtime Pay: " << overtimePay << endl;
    cout << "Total Salary: " << totalSalary << endl;
    return 0;
}
```

```
}
```

Question 9: Data Usage Bill

```
#include <iostream>
using namespace std;
int main() {
    double data, cost, bill;
    cout << "Enter Data Used (GB): ";
    cin >> data;
    cout << "Enter Cost per GB: ";
    cin >> cost;
    bill = data * cost;
    cout << "Total Data Bill: " << bill << endl;
    return 0;
}
```

Question 10: Fuel Consumption

```
#include <iostream>
using namespace std;
int main() {
    double distance, fuel, average;
    cout << "Enter Distance Traveled: ";
    cin >> distance;
    cout << "Enter Fuel Consumed: ";
    cin >> fuel;
    average = distance / fuel;
    cout << "Average Fuel Consumption: " << average << endl;
    return 0;
}
```

Question 11: Attendance Percentage

```
#include <iostream>
using namespace std;
int main() {
    double totalClasses, attended, percentage;
    cout << "Enter Total Classes: ";
    cin >> totalClasses;
    cout << "Enter Classes Attended: ";
    cin >> attended;
    percentage = (attended / totalClasses) * 100;
    cout << "Attendance Percentage: " << percentage << "%" << endl;
    return 0;
}
```

Question 12: Restaurant Bill

```
#include <iostream>
```

```
using namespace std;
int main() {
    double mealCost, taxPercent, taxAmount, totalBill;
    cout << "Enter Meal Cost: ";
    cin >> mealCost;
    cout << "Enter Service Tax (%): ";
    cin >> taxPercent;
    taxAmount = (taxPercent / 100) * mealCost;
    totalBill = mealCost + taxAmount;
    cout << "Meal Cost: " << mealCost << endl;
    cout << "Tax Amount: " << taxAmount << endl;
    return 0;
}
```
